EDUCATION

Tecnológico de Monterrey, Campus CEM (ITESM)

BS in Computer Science and Technology: 5th Semester

Mexico City
Expected June 2028

EXPERIENCE

Software Engineer Intern - Quickmind

Stack: Go, JavaScript (Baileys), Redis, LLM APIs, AWS RDS, Google Cloud

Mexico City
June 2026

- Automated 95% of freight trip logging for 2 brokers across 5 carrier groups (100+ members each).
- Piped live WhatsApp traffic into Redis; Go consumer batch-parses it via LLM into structured trips.
- Built the RDS schema and dashboard API; deployed on Google Cloud VMs.

PROJECTS

Gamified Educational Platform

Stack: C#, AWS Lambda, RDS, S3, React, JavaScript, Unity

Mexico City
April 2026

- Shipped a web platform embedding a Unity mental-math game, used by +100 students at NIDE's foundation.
- Built the serverless backend and infrastructure: user management, usage metrics, and site hosting.

IoT Weather Station

Stack: ESP32, Azure Event Hubs, MySQL, React, SwiftUI

Mexico City
November 2025

- Streamed 4 sensor metrics (air quality, temp, humidity, pressure) through a custom API into Azure Event Hubs and MySQL.
- Built a React dashboard and iOS companion app on a shared data layer for live and historical trends.

Personal Knowledge Agent

Stack: Raspberry Pi 5, Go, Redis, SQLite, local LLM inference, SwiftUI

November 2025

- Built an offline pipeline running entirely on-device: chat ingestion → Redis queue → Go batch consumer → local LLM → SQLite, extracting contacts, reminders, and follow-ups as structured JSON.
- Ships as a SwiftUI client surfacing the data, writing reminders through EventKit.

AWARDS

MIT Reality Hack 2026 - Winner, 2 tracks [\[Devpost\]](#)

Stack: Swift, ARKit

Cambridge, MA
January 2026

- Built TierSpace, a real-time collaborative app syncing state across clients, mapping subjective opinions onto multi-axis 3D coordinates.
- Added a tradeoff model scoring choices across cost, speed, and carbon emissions. Won 2 tracks against +348 participants.

HackHarvard 2025 - Winner, ElevenLabs track [\[Devpost\]](#)

Stack: Swift, ElevenLabs, ARKit

Cambridge, MA
October 2025

- Led development of Lingua Spatial: real-time object recognition feeding Gemini translations into Nahuatl, voiced through streamed TTS.
- Managed audio buffering and async API handling to keep speech latency usable in a live camera feed.

SKILLS

Programming Languages: Swift(Advanced), JavaScript(Advanced), C++(Intermediate), Go(Intermediate)

Tools: MATLAB, git, Xcode, Figma, Visual Studio Code, VisionOS, iOS

Concepts: Artificial Intelligence, Machine learning, App development, LLM, React, Next.js, APIs, AWS, Express.js, Linear Algebra, Competitive Programming
